

Website Build Brief

Purpose: Everything the person building our website needs — structure, pages, components, copy direction, tech requirements, and launch checklist. Hand this entire document to the builder; nothing else needed.

The site's ONE job: Convert a qualified visitor into a booked discovery call (or a paid productized order). Every page, section, and CTA must serve that goal.

1. Mission & Success Metrics

What the website is for

- **Primary goal:** Convert qualified traffic → booked discovery calls via Cal.com
- **Secondary goal:** Convert lower-intent traffic → productized Stripe checkout (Shopify chatbot, landing page)
- **Tertiary goal:** Build inbound SEO so we don't depend forever on Fiverr/Upwork/cold outreach

Target success metrics (Month 3)

Metric	Target
Unique monthly visitors	500+
Visitor → booking conversion	2%+
Avg time on site	90+ sec
Bounce rate	<60%
Most-visited page	<code>/pricing</code> (proves the transparency moat works)
Mobile traffic share	50–70% (build mobile-first)
Page speed (Lighthouse)	90+ on Performance, Accessibility, SEO

2. Site Architecture (Multi-Page, Not Single-Page)

Single-page sites look like landing pages and signal "small operator." Multi-page signals real agency + helps SEO.

/	Home
/services	Services overview
/services/ai-chatbot	Hero offer: AI Shopify Chatbot
/services/landing-page	Productized landing page
/services/automation	AI comment/DM automation
/services/custom	Custom software + AI builds
/work	Case studies index
/work/[slug]	Individual case study (3+ at launch)
/pricing	Transparent pricing tiers
/process	How we deliver (4-step + QA + warranty)
/about	Team, story, why Albania
/book	Cal.com embed page (booking)
/contact	Fallback contact page + WhatsApp
/blog	Phase 2 – launch with 1 SEO post
/blog/[slug]	Individual blog post
/privacy	Legal
/terms	Legal
/gdpr	Legal (we need this for EU clients – critical trust element)
/404	Custom 404 page

Footer (every page)

- Logo + tagline
- Service links column
- Company links column (About, Process, Pricing, Contact)
- Legal links column (Privacy, Terms, GDPR)
- Social icons (IG, LinkedIn, X, GitHub)
- Newsletter signup
- Copyright + Tirana, Albania address

3. Page-by-Page Specs

HOME (/)

Order top → bottom:

1. Hero (above fold)

- Headline: ONE clear sentence — e.g., *"We ship AI tools and software for global brands — in days, not months."*
- Subhead: 1–2 lines positioning + price anchor — e.g., *"Transparent pricing from \$250. 7-day delivery. Senior engineers (no bait-and-switch). Based in Albania."*
- Primary CTA button: **"Book a free 30-min call"** → </book>
- Secondary CTA: **"See our pricing"** → </pricing>
- Hero visual: looped 8-sec demo video OR a 3D-ish dashboard graphic. **Avoid stock photos of handshakes/laptops.**
- Trust strip below: "As featured on / Trusted by" — even with placeholder client logos at first (use spec clients from Day 7 builds)

2. Problem section ("Sound familiar?")

- 3 pain points in 3 cards: "Burned by cheap freelancers" / "Quoted \$50K by big agencies" / "Tired of code you don't understand or own"
- Each card: icon + 2-line description

3. Solution / What we do

- 3-card row of the 3 productized offers (Chatbot, Landing Page, Automation)
- Each card: name, price, timeline, "Learn more →" link

4. Why us (the transparency moat)

- 5 trust badges in a row OR 5-column grid: "Transparent pricing" / "Real case studies" / "Senior engineers only" / "100% IP ownership" / "30-day warranty"
- Each: icon + 1-line explanation
- **This section is the moat. Make it loud.**

5. Featured case study (1 spotlighted)

- Big card: client logo, "We built X in Y days, saving Z hours/week" — with real number
- "See all case studies →" link to [/work](#)

6. Process preview (4 steps)

- Visual timeline: Discover → Build → Review → Deliver
- Each step: 1 line + estimated days
- "Full process →" link to [/process](#)

7. Stats banner

- 4 numbers in a row: "X projects delivered" / "X% client retention" / "Y hours avg delivery" / "Z countries served"
- Update these as we grow. Start with: "15 projects delivered" / "100% on-time" / "48hr–7day delivery" / "5+ countries"

8. Testimonials carousel (3+ rotating)

- Quote + client name + role + company + small photo + result number
- Even at launch, run 1 founder testimonial yourself + 2 from spec-work pilots

9. FAQ teaser (5 questions)

- Most-asked objections: IP ownership / what if you go silent / are juniors going to build / payment terms / scope changes
- "Full FAQ →" link

10. Final CTA section

- Big "Ready to ship something real?" banner
- Big primary button → [/book](#)
- "Or DM us on Instagram" → [\[ig link\]](#)

11. Footer

SERVICES OVERVIEW ([/services](#))

- **Hero:** "What we build" headline + 2-line intro
- **3 productized service cards** (full-width, each links to its own page)

- **Custom services section:** "Need something custom?" → list custom service types with price ranges from the master plan
 - **Process preview** (same component as home)
 - **CTA section** — "Not sure what fits? Book a call, we'll tell you straight."
-

AI SHOPIFY CHATBOT (/services/ai-chatbot) — The hero offer page

This page must do the heaviest selling. It's the #1 SEO target.

Sections top → bottom:

1. **Hero:** "AI Customer Support Bot for Shopify — live in 7 days. \$497." + demo video embed (autoplay muted loop)
 2. **The problem we solve:** "Your support team is answering the same 20 questions, all day, every day. 60–80% of those can be automated."
 3. **What's included** (checklist):
 - Custom-trained chatbot on YOUR products, FAQs, policies
 - Order status lookup (live Shopify Admin API connection)
 - Product recommendations (semantic search)
 - Web widget + optional WhatsApp/Messenger
 - 1 round of revisions
 - 30-day warranty
 - Handover Loom + training docs
 4. **What it deflects** (real numbers from research): "70%+ of typical ecom support tickets are automatable. We've measured."
 5. **Timeline section** — 7-day visual breakdown
 6. **Demo video** (60–90 sec screen recording)
 7. **Pricing:** 3 tiers laid out — Basic \$197 / Standard \$497 / Premium \$997 (same as Fiverr gig)
 8. **Add-ons table:** multi-language +\$200, Klaviyo integration +\$200, voice chat +\$300, etc.
 9. **Compatible with:** Shopify logo + (later) WooCommerce, Magento logos
 10. **FAQ specific to chatbots** (8 questions)
 11. **CTA:** "Start your chatbot build →" → goes to Cal.com OR direct Stripe checkout
-

LANDING PAGE (/services/landing-page)

Similar structure to chatbot page, with:

- Hero: "Custom landing page in 48 hours — \$250"
 - Show 3 spec landing page examples in a grid
 - Timeline: 48-hour breakdown
 - What's included: Framer/Webflow build, 1 revision round, lead form, mobile-optimized, hosted on your domain
 - FAQ
 - CTA → Cal.com or Stripe
-

AUTOMATION (</services/automation>)

- Hero: "AI Comment & DM Automation — \$397 / 5 days"
 - Use cases: Auto-respond to Instagram comments, route negative DMs to humans, keyword-triggered flows
 - What's included
 - Demo video
 - FAQ
 - CTA
-

CUSTOM (</services/custom>)

- Hero: "Need something custom? Let's scope it."
 - Service types with price RANGES (not fixed): Custom web app, AI agents, multi-system integrations, retainer engagements
 - Process for custom: "Discovery → Scoping doc → Fixed-price proposal → Build"
 - Why fixed-price not hourly (transparency moat language)
 - CTA → "Book a scoping call"
-

CASE STUDIES (</work>)

Index page:

- Grid of 3–6 case study cards (3 at launch, grow over time)
- Each card: client logo / hero image, project type tag, headline result, "Read full study →"
- Filter chips: All / E-commerce / SaaS / Local business / AI

Individual case study page ([/work/\[slug\]](/work/[slug])) — template:

1. Hero: Client name (or "Anonymous Shopify Brand"), 1-line outcome ("Saved 22 hours/week")
2. Client snapshot: industry, size, revenue range, location
3. The problem (3–4 paragraphs)
4. Our approach
5. What we built (with screenshots/Looms)
6. The numbers (results table with before/after)
7. Client testimonial pull-quote
8. Tools used
9. Timeline
10. Investment
11. "Want similar results? →" CTA

Launch with 3 case studies minimum. If you don't have real ones yet, label them "Concept Project" / "Pilot" honestly — that's better than fake ones, and clients respect it.

PRICING (</pricing>) — **Critical page**

This is your differentiator. Every other Albanian agency hides this. We expose it.

Sections:

1. Hero: "Real prices. Real timelines. No 'contact us for pricing' bullshit."
 2. **Productized tier table** (3 columns):
 - Chatbot \$497 / 7 days
 - Landing Page \$250 / 48 hrs
 - Automation \$397 / 5 days
 3. **Custom work pricing ranges** table — same as master plan
 4. **What's included in EVERY project** (the trust list):
 - 50/50 payment split
 - 100% IP transfer on final payment
 - 30-day post-launch warranty
 - Weekly Loom video updates
 - Named senior engineer (not bait-and-switch)
 - GDPR-compliant data handling
 5. **What's NOT included** (transparency about scope):
 - Hosting beyond Year 1
 - Premium SaaS tool subscriptions (Shopify, etc.)
 - Ongoing content creation
 - Paid ad management
 6. **Payment methods**: Stripe (cards), wire transfer, crypto if requested
 7. **FAQ on pricing** (5 questions)
 8. **CTA**
-

PROCESS (/process)

The page that converts skeptics. Shows operational maturity.

Sections:

1. Hero: "How we work. Every step. No surprises."
2. **The 4-step framework** (full-width visual):
 - **Discover** (Day 0): 30-min call, free scoping doc
 - **Build** (Days 1–N): Daily progress, weekly Looms, staging-first
 - **Review** (Days N–N+2): Client testing, 1 revision round
 - **Deliver** (Day N+3): Production push, handover Loom, code transfer
3. **Communication SLAs** (table):
 - DMs/Slack/Email response: 2 hrs (business hours)
 - Weekly Loom: every Friday
 - Status updates: every Tuesday
4. **QA process** (numbered list):
 - Self-test against acceptance criteria
 - Peer review
 - Staging deployment + automated checks
 - Internal walkthrough Loom
 - Client review on staging
 - Production push
5. **IP & data policy** statements (verbatim from master plan)

6. **30-day warranty** — what's covered, what's not

7. **CTA**

ABOUT (/about)

The most personal page. This is where trust gets built.

Sections:

1. Hero: "We're a small team in Tirana. We ship real software."
 2. **Founder section:** Your face, name, 200-word origin story, why you started this
 3. **The team grid:** 2–4 people with photos, names, roles, 1-line each. NO stock photos. Real humans only.
 4. **Our principles** (5 statements):
 - Transparency over polish
 - Senior engineers only, no bait-and-switch
 - You own everything we build
 - We ship in days, not quarters
 - We tell you when something won't work
 5. **Why Albania?** — short, punchy:
 - Cost-effective: nearshore pricing without offshore quality drop
 - Talent: rising tech ecosystem, Mira Murati / "Future Now" Albania backdrop
 - Timezone-friendly: 1 hour ahead of UK, same as Germany
 6. **Office / setup photo** (real, not stock)
 7. **CTA**
-

BOOK A CALL (/book)

- Minimal page
 - Hero: "Book a 30-min call. No pitch — we listen, ask questions, tell you straight if we're a fit."
 - Embedded Cal.com widget (full-page if possible)
 - What to expect (4 bullet points)
 - Privacy note: "Your info is private. We don't add you to email lists without permission."
-

CONTACT (/contact)

Fallback for visitors who don't want to book a call yet.

- WhatsApp click-to-chat button (mobile + desktop)
 - Email: hello@yourdomain.com (large, clickable)
 - Simple contact form (Name / Email / Message / Optional URL)
 - Address: "Tirana, Albania" (no street needed)
 - Response time promise
-

BLOG (/blog) — Launch with 1 post

Phase 2 priority. Launch with 1 SEO-targeted post:

- "How to add an AI chatbot to your Shopify store in 2026 (real costs, real timelines)"
- Targets the Google searches identified in research

Template:

- Hero with title + author + date + read time
 - Cover image
 - Body (h2/h3 structure for SEO)
 - Author bio at bottom
 - Related posts
 - CTA box mid-post + at end
-

LEGAL PAGES

/privacy — standard privacy policy, GDPR-compliant. Use [Termly](#) generator (free tier).

/terms — standard SaaS-style terms. Termly again.

/gdpr — *this is a trust page, not just compliance*. Write in plain English:

- "How we handle your data"
 - "Where your data is stored"
 - "Your rights"
 - "How to delete your data"
 - Why this matters specifically for German/UK clients (the research called this out as a trust trigger)
-

4. Reusable Components Library

The builder should create these as reusable components — used across multiple pages.

Component	Where it's used	Variants needed
Hero block	All pages	Standard / with video / with form
Pricing card	Pricing page, service pages, home	Basic / featured / enterprise
Service card	Home, services, footer	Standard
Case study card	Work page, home, footer	Compact / full
Testimonial card	Home, service pages, about	Quote-only / with avatar / with metrics
CTA banner	End of every page	Standard / inverse
Stats row	Home, about	3-stat / 4-stat
FAQ accordion	Multiple pages	Standard
Process step	Process page, home	Numbered / iconed
Team card	About page	Standard
Feature checklist	Service pages	Standard
Trust badge row	Home, footer	3-up / 5-up
Newsletter signup	Footer, blog	Inline / modal
Sticky mobile CTA	All pages on mobile	"Book a call" button bottom-right

5. Design System

Color palette (recommended defaults — can adapt to final brand)

Role	Hex	Usage
Primary brand	<code>#2563eb</code> (or pick your own)	Buttons, links, accents
Primary dark	<code>#1e3a8a</code>	Headings, dark surfaces
Background	<code>#ffffff</code>	Body
Surface	<code>#f8fafc</code>	Cards, alt sections
Text	<code>#0b1220</code>	Body copy
Muted	<code>#64748b</code>	Captions, metadata
Border	<code>#e2e8f0</code>	Dividers
Success	<code>#16a34a</code>	"Available" / "Live" badges
Accent (optional)	<code>#f59e0b</code>	Highlights, "popular" tag

Avoid: Generic agency purple gradients. Look at [Linear](#) / [Vercel](#) / [Cal.com](#) for inspiration — clean, technical, modern.

Typography

- **Headings:** Inter, Geist, or DM Sans (free Google Fonts)
- **Body:** Same family or Source Sans Pro
- **Mono (code/numbers):** JetBrains Mono or Cascadia Code

Type scale:

- H1: 48–60px
- H2: 32–40px
- H3: 22–28px
- Body: 16–18px
- Small/caption: 13–14px

Spacing & layout

- **Max content width:** 1200px
- **Section vertical padding:** 80–120px (desktop), 48px (mobile)
- **Component padding:** 24–32px
- **Grid:** 12-column with 24px gutter

Brand voice (for copy)

- **Direct, not corporate** — "We ship in 7 days" not "We strive to deliver excellence"

- **Specific, not vague** — Real numbers, real timelines, real names
- **Confident, not arrogant** — Make claims you can back up
- **Honest about limits** — "We don't do mobile app dev. We refer those out." (builds trust)

6. Technical Stack

Recommended primary build

- **Framer** (recommended) — fastest to ship, looks premium out of the box, easy team handoff, built-in CMS, no dev needed
- Cost: free → \$20/mo for custom domain → \$40/mo for Pro
- **Alternative: Webflow** — more flexibility, steeper learning curve, similar pricing

Hosting & infrastructure

- **Hosting**: Included in Framer/Webflow
- **Domain**: Already registered (Day 1)
- **CDN**: Built into Framer/Webflow
- **SSL**: Automatic
- **DNS**: Cloudflare (free) — adds extra speed + security layer

Integrations checklist

Integration	Purpose	Tool
Booking	<code>/book</code> page	Cal.com embed
Payments	Direct checkout from pricing/service pages	Stripe payment links
Live chat	Optional, lower-funnel	Crisp or Intercom (free tier) — or just WhatsApp
Newsletter	Footer signup	Beehiiv or Mailchimp
Forms	Contact + lead capture	Native Framer/Webflow forms → Google Sheet + email notify
Analytics	Traffic + behavior	Plausible (recommended, privacy-friendly) OR Google Analytics 4
Heatmaps	Optional, post-launch	Microsoft Clarity (free)
SEO	Sitemap + metadata	Built-in Framer/Webflow + manual schema markup
WhatsApp	Mobile click-to-chat	Plain <code>https://wa.me/[number]</code> link in footer + sticky button

7. SEO Requirements

On every page

- ☐ Unique title tag (50–60 chars)
- ☐ Unique meta description (150–160 chars, with a CTA)
- ☐ One H1 per page
- ☐ Proper H2/H3 hierarchy
- ☐ Image alt text on every image
- ☐ OG image (1200×630px) for social sharing
- ☐ Twitter card metadata
- ☐ Canonical URL

Site-wide

- ☐ `/sitemap.xml` auto-generated
- ☐ `/robots.txt`
- ☐ Schema.org markup:
- LocalBusiness schema on home + about + contact
- Service schema on service pages
- FAQPage schema on FAQ sections
- BreadcrumbList on deeper pages
- ☐ Submit sitemap to [Google Search Console](#)
- ☐ Submit to Bing Webmaster Tools
- ☐ Verify domain ownership

Target keywords (from research)

Page	Primary keyword	Secondary
Home	software agency albania	nearshore software development
AI Chatbot service	ai chatbot for shopify	shopify customer support automation
Landing Page service	custom landing page design	framer landing page service
About	albania software developers	—
Blog post 1	ai chatbot shopify cost	shopify chatbot pricing

8. Performance & Accessibility

Performance targets

- ☐ Lighthouse Performance: **90+**

- ☐ First Contentful Paint: <1.5s
- ☐ Largest Contentful Paint: <2.5s
- ☐ Cumulative Layout Shift: <0.1
- ☐ Total page weight: <2 MB per page
- ☐ All images: WebP format, lazy-loaded below the fold
- ☐ Video: hosted on Mux/Cloudflare Stream OR YouTube embed with lazy load

Accessibility (WCAG AA minimum)

- ☐ Color contrast 4.5:1 on body text, 3:1 on large text
- ☐ All interactive elements keyboard-accessible
- ☐ Focus states visible
- ☐ Alt text on all meaningful images
- ☐ Form labels associated correctly
- ☐ No flashing/auto-playing audio
- ☐ Skip-to-content link in header
- ☐ ARIA labels on icon-only buttons

Mobile-first checklist

- ☐ Test on iPhone (Safari) + Android (Chrome) — REAL devices, not emulators
- ☐ Tap targets ≥ 44×44px
- ☐ Forms usable on mobile keyboards (proper input types)
- ☐ Sticky CTA button visible on mobile
- ☐ WhatsApp button visible on mobile

9. Trust Elements (Non-Negotiable)

These MUST be visible on the site. They're the moat.

- ☐ **Pricing visible** on home + dedicated pricing page (no "contact us")
 - ☐ **Team faces + real names** on about page
 - ☐ **30-day warranty** mentioned on pricing + process pages
 - ☐ **100% IP ownership** statement on pricing + process + terms
 - ☐ **GDPR-compliance** page accessible from footer
 - ☐ **Senior engineers only** statement on about + process
 - ☐ **Communication SLAs** on process page
 - ☐ **Real case studies with numbers** (even 1 at launch)
 - ☐ **Founder contact** — email or LinkedIn linked, not generic info@
 - ☐ **Honest scope** — "what we don't do" section on services
-

10. Content Inventory (What to Prepare BEFORE Build Starts)

The builder needs these assets handed over before they can finish. Prep this in parallel:

Copy (Google Docs)

- ☐ All headlines + subheads for every page
- ☐ Body copy for service pages (300–500 words each)
- ☐ 3 case study write-ups (500–800 words each)
- ☐ Founder bio (200 words)
- ☐ Team bios (50 words each)
- ☐ 15+ FAQ entries (split across pages)
- ☐ About page origin story (300–400 words)
- ☐ Privacy / Terms / GDPR text (via Termly generator)

Visual assets

- ☐ Logo (SVG + PNG, light + dark versions)
- ☐ Favicon (32×32, 64×64, 180×180)
- ☐ OG image template (1200×630)
- ☐ Team headshots (high-res, consistent style)
- ☐ Office/setup photo (or a generic "workspace" if avoidable)
- ☐ 3+ case study screenshots
- ☐ Hero demo video (8 sec loop or 60-90 sec story)
- ☐ Stripe payment link images / Cal.com booking widget

Video assets

- ☐ Hero loop video (8–15 sec, no sound, autoplay)
- ☐ AI chatbot demo (60–90 sec)
- ☐ Landing page demo (timelapse, 60 sec)
- ☐ Founder intro Loom (60 sec, optional but high-conversion)

11. Pre-Launch Checklist

Technical

- ☐ Domain pointing to site, SSL active (`https://` works)
- ☐ All `/services/*` , `/work/*` , `/blog/*` URLs work
- ☐ 404 page is custom-styled
- ☐ All internal links work (no broken links)
- ☐ All external links open in new tab where appropriate
- ☐ Forms submit successfully (test each)

- ☐ Cal.com booking flow works end-to-end (test with a real booking)
- ☐ Stripe checkout works (test with \$1 charge)
- ☐ Email notifications fire on form submit
- ☐ WhatsApp button opens correct number
- ☐ Newsletter signup confirmed working

Content

- ☐ No placeholder text (`Lorem ipsum` , `[CLIENT NAME]`)
- ☐ No broken images
- ☐ Spell-check every page
- ☐ All prices match master plan
- ☐ All timelines match master plan
- ☐ Legal pages reviewed

SEO

- ☐ Unique meta titles + descriptions on every page
- ☐ OG images render correctly (test on opengraph.xyz)
- ☐ Sitemap submitted to Google Search Console
- ☐ Schema markup validates ([Schema Validator](https://validator.schema.org))
- ☐ No `noindex` tags on public pages

Performance

- ☐ Lighthouse scores 90+ across the board (test on [PageSpeed Insights](https://pagespeedinsights.com))
- ☐ Tested on mobile + desktop + tablet
- ☐ Tested on Chrome + Safari + Firefox + Edge
- ☐ Images optimized (WebP, compressed)
- ☐ Video files under 5 MB

Analytics

- ☐ Plausible/GA4 installed + tracking
- ☐ Goal tracking set up for `/book` page visits + form submits
- ☐ Microsoft Clarity heatmaps installed (optional)
- ☐ Cookie banner (if using cookies — Plausible doesn't require one)

Trust

- ☐ Pricing visible without clicking
 - ☐ Team faces + names visible
 - ☐ GDPR page exists and is honest
 - ☐ Privacy/Terms link visible in footer
 - ☐ Albania address visible somewhere (footer or contact)
-

12. Post-Launch Plan (First 30 Days)

Week 1

- Daily: check analytics, check forms working, check Cal.com bookings
- Submit to Google Search Console + Bing
- Announce on personal LinkedIn, IG, WhatsApp
- Get 5 friends to "audit" the site, collect feedback

Week 2

- Push 1 blog post (the AI chatbot one)
- Run a \$30 Meta ad pointing to the chatbot service page
- A/B test: original hero vs. variant (use Framer's built-in A/B if available)

Week 3–4

- Add 1 more case study
- Iterate hero based on data: if bounce rate >70%, rewrite headline
- Set up email capture popup (only if newsletter is launching)
- Re-audit mobile experience after 100+ mobile visits

Month 2+

- Add `/blog` content: 1 post/2 weeks targeting research keywords
- Add `/work` case studies as projects ship
- Add a "Pricing Calculator" tool on `/pricing` for custom estimates
- Add live chat (Crisp/Intercom) if conversion is below 1.5%

13. The Site Done Right Looks Like...

Open these for inspiration. Look at structure, not copy:

- **Cal.com** — clean, transparent pricing, dev-feel
- **Linear** — typography, spacing, brand voice
- **Resend** — landing page execution
- **Vercel** — hero structure, social proof
- **Lemon Squeezy** — playful but professional
- **Posthog** — long-form pricing page done well

What to study about each:

- Hero structure (headline → subhead → CTA placement)
 - How they handle pricing transparently
 - How they show "real humans" on about pages
 - Their case study format
-

14. Handover Package (What the Builder Delivers)

When the site is "done," the builder hands over:

- ☐ Live site at production URL
 - ☐ Admin access to Framer/Webflow account
 - ☐ Documentation of all CMS collections (case studies, blog posts)
 - ☐ List of all integrations + credentials (in 1Password / Bitwarden vault)
 - ☐ Style guide / design tokens reference
 - ☐ How-to Loom: "Adding a new case study"
 - ☐ How-to Loom: "Updating pricing"
 - ☐ How-to Loom: "Publishing a blog post"
 - ☐ 30-day post-launch warranty (bugs fixed free)
-

15. Realistic Build Budget

If the builder is internal (you / team): ~40–60 hours total work.

If contracting externally:

- **Framer template + customization:** \$800–2,500
- **Custom Framer build:** \$2,500–6,000
- **Custom Webflow build:** \$3,500–8,000
- **Full custom Next.js + CMS build:** \$8,000–20,000

Recommendation for Stage 1: Framer template + heavy customization. Get to live in 1 week. Iterate from data.

This brief is the contract with the builder. If anything's missing, it gets added here first, then implemented. Don't build off scattered Slack messages.
